

A SKILLED DEMONSTRATION OF UBIQUITY

DURING THE AUTUMN FAIR SEASON, POLYTEC INDUSTRIAL'S PIONEERING CAPABILITIES WERE ON OMNIPRESENT DISPLAY

The Blechexpo and Schweisstec trade fairs constitute a globally unique duo that focuses biannually on the complementary areas of sheet processing and joining technology. POLYTEC INDUSTRIAL was not only able to enthrall the specialist visitors at this singular event from November 3rd to 6th 2015 in Stuttgart, but at the same time the POLYTEC GROUP's business unit specialising in industrial applications also showcased its product innovations at specialist fairs in Dortmund and Bochum.

ONE-STOP-SHOPPING SOLUTIONS FOR SHEET HANDLING AND STORAGE

For POLYTEC INDUSTRIAL, which has a competence range that supports metallurgical industry companies in the areas of production, processing and storage, participation at the **Blechexpo** represented a premiere. However, the time was ripe for the presentation to the steel world of an interactive stand on which many of the exhibits were of original size.

Within a very short time, the Blechexpo has captured the no.2 global ranking among the specialist fairs for sheet processing. And with well over 1,000 exhibitors from more than 30 nations and an exhibition area of 70,000 m², it not only offers quantity, but also convincing quality. The declared objective of the fair association is to present the entire cold rolled sheet processing chain, as well as the related thermal and mechanical cutting, joining and bonding techniques.

At the Blechexpo 2015, POLYTEC INDUSTRIAL demonstrated its full range of advisory competence. On the company stand, interested fair visitors were able to obtain information about innovative plastics solutions for the steel industry.

SCHÜTTGUT

OVER 150 IN-HOUSE-DEVELOPED POLYURETHANE RECIPES FOR INDIVIDUAL APPLICATIONS

For the second time in succession, POLYTEC INDUSTRIAL presented the application possibilities for moulded polyurethane parts and abrasion-protective coatings at the largest German **Schüttgut** (bulk material) fair, which is held in the Westfalenhalle in Dortmund, the innovative fair has evolved into an important, supra-regional specialist event.

As the positive experiences gathered during the last trade fair presentations have shown, polyurethane has become an indispensable material where wear and noise protection for transport systems and components are involved. In particular, POLYTEC INDUSTRIAL's ability to develop a diversity of recipes for individual applications in-house is the object of great interest among the fair's expert visitors.

A major attraction at the Schüttgut: our innovative spray system means that complicated part disassembly is no longer required prior to coating

DO-IT-YOURSELF: WEAR PROTECTION USING THELAN® POLYURETHANE

Under this motto, in 2015 POLYTEC INDUSTRIAL showcased a new cartridge system for sprayed coatings. Using a specially coordinated 2-component system, users have the possibility to easily create top

quality, wear-resistant polyurethane layers for themselves. The POLYTEC spray gun and static mixers provide a homogenous, seamless and highly wear-resistant coating for applications such as surface repairs.

WITH PURE PASSION

... we convince as a reliable and competent supplier of heavy, sprayed polyurethane corrosion protection for all types of armatures. Therefore, it was only logical that POLYTEC INDUSTRIAL could not miss the **DIAM**, Germany's specialist fair for industrial armatures, sealing, drive and plant technology.

In the tradition-rich Jahrhunderthalle, which is only a few kilometres away from the group subsidiary in Bochum, on the POLYTEC stand visitors to the fair were able to see for themselves the advantages of armatures coated with polyurethane. Our coatings are impact- and chemical resistant and provide solid protection against corrosion and abrasion.
